

For a bright complexion: More beautiful skin with the new MEDISANA Beauty Light Therapy

Neuss, 31.08.2018. Beautiful, radiant skin without annoying spots, pustules and wrinkles - who wouldn't like to have that? With the new Beauty Light Therapy by MEDISANA, you can get closer to this wish, as light therapy is a clinically tested anti-acne treatment, which is also offered by dermatological practices. It is based on the interaction of red and blue light rays, which gently penetrate the skin and complement one another perfectly. While the blue light, with its antibacterial effect, combats bacteria that cause acne, the red light reduces infections and supports skin rejuvenation.

The new **MEDISANA DC 300 Light Therapy Pen** is a light therapy product in a handy form. It offers two therapies in one device: Blue light improves acne, red light supports skin rejuvenation and reduces the appearance of wrinkles and fine lines. An application of two times five minutes per day is already verifiably effective. This way, individual acne spots can be treated in a fast and targeted manner - not only for young people, who suffer from greasy skin. The DC 300 LED Light Therapy Pen is lightweight and handy - perfect when you are on the go and space-saving in the bathroom. Particularly practical: It switches off automatically after five minutes.

The new DC 300 LED Light Therapy Pen will prospectively be available from the fourth quarter of 2018 at a price of EUR 39.95 RRP in specialist retail shops, as well as at www.medisana.de.
