

The FFP2 particle filtering half mask RM 100 from medisana convinces in the Stiftung Warentest in terms of breathing comfort and filter effect

Neuss, 05.03.2021. The FFP2 particle filtering half mask RM 100 from the Neuss-based health company medisana convinced in the current FFP2 mask test by Stiftung Warentest: In the most important test criteria “breathing comfort” and “filter effect for aerosol particles”, the RM 100 received the best possible test rating “High”. The testers from Stiftung Warentest therefore confirm that the filter effect of the medisana model tested can be relied on: It held back around 99 percent of the aerosol particles and therefore demonstrably protects against Covid-19. The renowned test institute also gave top marks for “breathing comfort” – breathing is easy when wearing the certified medisana particle filtering half mask RM 100. This should especially please those who have to wear a mask for many hours a day. The medisana particle filtering half mask also did not present any abnormalities with regard to harmful substances.

In the context of the test criterion “Fit”, the RM 100 achieved the second-best rating and is therefore far ahead in the overall result. In order to ensure an optimum fit and the best possible protection, medisana points out that it is essential for users to ensure a proper placement according to the shape of their face. For this purpose, an additional clip is supplied with every medisana mask, which can be attached to the rubber straps on the back of the head if necessary. This allows the mask to fit closer to the face and can provide a better fit for different head and face shapes. Overall, the FFP2 particle filtering half mask RM 100 from medisana received the second-best overall rating in the mask test by Stiftung Warentest – and also impresses by having only half the purchase price compared to the test winner.

As one of the leading specialists in health care and with many years of experience in the manufacture of medical products, medisana became involved in the production of FFP2 masks at an early stage in order to help protect the population. The medisana particle filtering half masks RM 100 are classified in protection class FFP2 (protection against harmful substances such as solid and liquid dust, smoke and aerosols), CE-certified (CE 2834) in accordance with Regulation (EU) 2016/425 for personal protective equipment and the applicable standard EN

149:2001/A1:2009. This European certificate is valid for five years. The medisana FFP2 masks RM 100 have an efficient 3-layer filter system, are individually packed to prevent possible contamination before use, and are intended for single use.

The medisana FFP2 particle filtering half masks RM 100 are now available online at www.medisana.de and in specialist shops.
